Paternalistic leadership in family firms: Types and implications for intergenerational succession. Relatively good results from the variance inflation factor and blindfold tests support the potential predictive power of this construct. Among the four independent variables that compose an EFBC, these second-order Based on a sample of German family firms, the author indicates that, against expectations, family firms' performance is not driven by strategic fit but through the effective use of family-specific factors such as family business governance and family culture. Owners with management and industry experience are positively associated with firm performance Dyke et al. Other research found that Shared Vision influences firm performance Calant focuses on the assessment of the ability of the firm's leadership or top management team to be successful.
