The air spirals out of the top and is carried away by high altitude winds creating the canopy of clouds. Tropical Depression: A low pressure area over the tropical ocean that has a well-defined low-level circulation center along with organized squalls around the center. To develop into a hurricane, the winds aloft need to blow from approximately the same direction and at the same speed.

Holdontight,gang—andwemeansupertight! When there is a large area of thunderstorms that last more than a day, it is called a tropical disturbance. Just six inches of moving flood water can knock a person over, and swift-moving water can sweep a vehicle away as it flows by. This include batteries, flashlights, cash, and first aid supplies, along with anything

else that fits your personal needs.

These lines of storms are where tornadoes typically form. These powerful waves can smash structures not designed to withstand their force. For example, a coastal business may have a plan that only requires evacuation for a Category 3 hurricane or greater.
