There is no treatment or cure for this problem, but a Loss of Nerve (Shadows) person can learn to adapt in various ways. Atypical features include loss of pain prior to clinical presentation, optic pallor from the onset, complete vision loss with no improvement over the disease course, and a bilateral presentation. Inherited disease that, over time, causes deterioration of the specialized light-sensitive cells of the retina.

Condition associated with premature birth, in which the growth of normal blood vessels is delayed. Moreover, electrophysiologic or sonographic changes can be seen in median nerve in patients with SSC, without the symptoms of CTS [8]. The onset of NMO varies from childhood to adulthood, with two peaks, one in childhood and the other in adults in their 40s. Carpal tunnel syndrome CTS is the entrapment of median nerve under the flexor retinaculum. Choroideremia Choroideremia is a genetic condition that causes progressive vision loss. People with choroideremia have found ways to learn, play, and work, even though they have trouble seeing or can't see at all. Gilliland BC.
